

WIRELESS PORTABLE INPUT DEVICE AND RECEIVER OF THE SAME

ABSTRACT OF THE DISCLOSURE

A wireless portable input device and a receiver of the same is disclosed. According to one aspect of the present invention, the receiver of the input device can be detached
5 from the motherboard and stored within a receiving chamber of the input device when not in use. The receiver is rotatably mounted on the computer and is designed to be stored within the input device in a first space therewithin when not in use. With the buckling portion formed axially within a second space of the input device the receiver can be positioned therein so that the space occupation can be substantially reduced and also the
10 receiver and the input device of the present invention can be easy assembled.
